37. a) painful

b) immediate

c) valuable

d) invisible

## Reading

3.5	<p style="text-align: right;">متن زیر را به دقت بخوانید.</p> <p>Amounts of sleep vary greatly with age and even between individuals. Newborns sleep the most- a newborn baby sleeps between 17 and 18 hours a day, spending nearly half of that time in REM sleep (periods of eye movement during sleep). Both REM and NREM (nonrapid eye movement) sleep decrease with age, and by age five, children sleep between 10 and 12 hours a dayspending about 20 percent of that time in REM sleep. The average young adult seems to need about 8 hours of sleeper night to function well enough during waking hours. Some people , however, sleep just 6 or 7 hours a night, while others need more than 9 hours to feel rested. Old people spend less time in deep NREM sleep, and their sleep is more easily interrupted. REM sleep amounts also vary across different animals, depending on the size of the animal and its level of development at birth. The size of an animal seems to affect the type of sleep it experiences –small animals generally spend more time in REM sleep. Animals, such as opossums and humans that are born in a condition in which they are unable to look after themselves or to do anything to help themselves, generally have more REM sleep as newborns than animals that can hunt,eat, keep warm, and defend themselves soon after birth, for instance horses. Even as animals age into adulthood, those born relatively immature continue to spend more time in REM sleep than animals that are mature at birth.</p> <p>38. A newly born baby spend about 8.5 hours in REM sleep. (T-F)</p> <p>39. The passage states that those who are likely to wake up more often during their sleep are  a)adults      b)children aged      c) newborns      d) old people</p> <p>40. What does paragraph 3 mainly discuss?</p> <p>41. How many hours do college students need to sleep?</p>	0
