## Reading

۹. متن زیر را بخوانید و به سوالات مربوطه پاسخ دهید.

There are many languages in the world, some of which may seem harder to learn for second or foreign learners. But which is the most difficult language to learn? Well, it's not easy to reply because there are many factors to discuss.

A native speaker of French, for example, will find English easier to learn than Chinese, because English is very similar to French, while Chinese is very different. As a result, first Language can affect learning a second language. The greater the differences between the second language and the first, the harder **it** will be to learn. Many people answer that Chinese is the hardest language to learn, possibly influenced by the thought of learning the Chinese writing system. Besides, the pronunciation of Chinese does appear to be very difficult for many foreign learners. However, for Japanese speakers, who already use Chinese letters in their own language, learning writing will be less difficult than for speakers of languages using the Roman alphabet. Teachers and the conditions in which the language is learned also play an important role, as well as each learner's motivation for learning. If people learn a language because they need to use it for a living, they often learn it faster than people who study a language that has no direct use in their day to day life.
