من را بخوانید و به سئالات به طور خلاصه شده پاسخ دهید. 7-

The solar system is the sun and the objects that travel around it. The Earth is part of solar system because it also travels around the sun.

The sun is a star like the other stars in the sky but it is much closer to the Earth. The sun is a big ball of gases made mostly up of hydrogen and helium.

There are seven other planets that travel around the sun, too. These planets, in order, are Mercury, Venus, Mars, Jupiter, Saturn, Uranus, and Neptune. Earth is between Venus and Mars. Each of the planets in the solar system takes a different amount of time to travel around the sun.

The planet Earth takes 365 days or one year to go around the sun. The other planets take more or less time to go around the sun. It takes Mercury less than two months or 88 days to travel around the sun. It is the shortest time compared to the other planets. The planet taking the longest time to go around the sun is Neptune. It takes Neptune 165 years to travel around the sun.

The planets of the solar system are of different sizes and are made up of different things. The largest planet in the solar system is Jupiter. Over 1,000 Earths could fill the size of Jupiter. The smallest planet is Mercury, which is also the closest planet to the sun. Earth and Venus are similar in size to each other.

الف - گزینه صحیح را انتخاب نمایید. 3. نمره

23- The sun and the objects that travel around it is called

- a) planets b) the solar system c) moons d) stars

24- What is the difference between the Sun and the other stars of the universe?

- a) The sun is much farther away. b) The sun is too small.
c) The sun is closer to the Earth. d) The sun is much larger.
